Responses shared with the instructor and their supervisors

A1: In a few sentences, please provide feedback on your learning experience in this course. Consider the assignments and feedback you received, materials, learning activities and interactions with peers, your interactions with the instructor and other aspects related to your learning experience that you want to mention.

Amazing instructor, very understanding, helpful and thorough
The professor had great feedback and helped greatly with the learning experience. The course was difficult, but professor Hahn provided the necessary materials in order to be successful in this class.
He did a great job on balancing each day with enough topics
The course provided a robust technical foundation through well-structured assignments and clear instructional materials. I particularly valued the balance between theoretical concepts and practical application, which allowed me to see the immediate utility of the methods we studied. The feedback on assignments was timely and constructive, helping me refine my approach to complex problems throughout the semester.
I found this course to be extremely beneficial in building my understanding of data science and using R.
The learning experience overall was very positive and engaging. The material was very well explained and demonstrated. Professor Hahn really cared for his students' success.
My learning experience in this course has been very positive. The assignments were the right difficulty. Help was offered whenever needed. The instructor was willing to do whatever he could to help benefit the students.
The learning experience was great. The materials were detailed and the instructor was very helpful as well.
Overall, I thoroughly enjoyed this course and learned a lot about regressions, but more importantly, I became much more confident with R and with coding in general. I thought that the Problem Sets were a good way to practice the things we have learned with out being too stressful.
I think everything was good. The quizzes and midterm asked good questions, and the code examples were very helpful to understand everything.
Instructor was always very helpful with code and assignments. I feel my best way of learning was the problem sets. Quizzes were helpful. I also feel I learned better on activity days because we utilized the topics we learned in class.
I enjoyed the in class assignments as it helped me not fall behind. I enjoy the pacing of the material and how you always have a positive energetic attitude!
The assignments and learning activities were very beneficial to my overall learning for this class.
HW are great, I had him in last semester, is a great teacher
I think I had a good experience in the class and it provided me with substantial and applicable R and statistics knowledge.
I feel like I had an amazing learning experience in this course. The instructor is very straightforward, but also very understanding. He never overwhelmed us, yet made sure we were taught properly.
I had a blast taking this course, the lectures were fun and I really enjoyed our in class activities as it allows us to perform what we have learned in the lecture of the day.
Great interesting assignments that teach you the content well

		Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N	Mode	Median	
		1	2	3	4	5				
A2	The overall structure of the course (content and materials, assignments, activities) promoted a meaningful learning experience for me.	-	-	-	3	16	19	5	5	
		-	-	-	16%	84%				
A3	The instructor created a welcoming and inclusive environment.	-	-	-	1	18	19	5	5	
		-	-	-	5%	95%				

A4: In the space provided, please provide an explanation for your rating in the previous question.

Very easy to talk to and very understandng. responds to emails quickly
He always considered the students' point of view in terms of assignments and grades.

The instructor was very open to helping students and made it clear he wanted them to succeed.
The professor took time to explain doubts and concepts throughly and also gave quick replies to email.
The professor was very nice and welcoming.
It was a meaningful learning experience for me because the instructor gave activities everyday to ensure everyone understood what was going on.
Overall, this class was a welcoming environment created by focusing on our own wellbeing,adjusting due dates when needed.
The instructor fostered a professional and supportive atmosphere where questions were encouraged and addressed with care. By providing clear guidance and being accessible during office hours, they ensured that students felt supported in their academic growth, regardless of their starting proficiency with the course material.
The professor is highly understanding of students and their ability to learn and as such has been very accommodating to us fostering a great learning experience.
He was very approachable. He made students feel like they could ask any question. If something wasn't understood he would take the time to explain it and make sure that everything made sense.
always happy to help
Professor Hahn answered all the questions I had. He was also very flexible and understanding that, as students, we have other classes to focus on. He never gave an unfair amount of workload.
The professor answered my questions and emails in time which was helpful.
He was very responsive to emails and was open to extenuating circumstances. He also made sure to listen to your question and answer it to the best of his ability.
the professor was nice
Was always helpful with code and assignments. He always answered emails quickly and communicated very well.

Responses shared only with the instructor

A5: If your course required materials, which materials or resources enhanced your learning? How?

RStudio enhanced my learning as it is my preferred IDE for R
the hw questions
I liked all the walking through the code
The only required course material would be RStudio. It was a very easy way to write and run all the code we went over in class.
There is no necessary course materials besides RStudio.
the slides and problem sets
Lecture slide were good since they were organized and detailed.
The daily activities that we did during the class time.
I think the lectures were really helpful, as well as you walking through the code on the board with us. This helped with the understanding behind the code and models.
I would say the allowance of using AI to a certain extent. This is because it was able to be a blueprint for us to learn and understand the topic.
The only "required material" is an installation of R (which many Statistics students already have). Professor Hahn uploads informational slides and PDF's further explaining the lectures that occurred in class. These were really beneficial to enhancing my learning.
The powerpoints were very helpful to cross reference to help with the problem sets and activities.
N/A
The homework contributed a lot to my learning.
I think it's pretty good already.
•maybe textbook

A6: What are the most important things you learned in this course?

Regression Analysis
I learned a lot about R and regressions that I will need for my future.
Truly understanding how we can employ learning algorithms.
•in class acitvity w r code •how to use r in real life
how different ML algorithms actually function
In depth coding with R.
the r code
The most important things I learned in this course was learning regression modeling and data visualization.
My proficiency in R improved greatly. This will surely help me in future courses.
The most important things I learned in this course was how to properly build models.
I think all the different machine learning methods were equally important for a good foundational ML knowledge
The most important things I learned in this course were how to decide which algorithm is appropriate to use for different datasets (e.g., k-

nearest neighbors classification, random forest, k-means clustering). Also, the tools used to evaluate different implemented models (e.g, Confusion Matrix, Gini Index, AUC) were very important to my overall education.
I think the most important thing I learned was about modeling and regressions. However, I think becoming more familiar with R was an even more important skill I learned.
How to problems solve with code and how to adapt when code is not working or challenging. Applying statistical reasoning to data. Various statistical tests done with data.
This course covered many topics that relate to machine learning, sparking my interest in that field and ultimately leading to me changing my major.
Lasso regressionDecision trees Random forests

A7: Do you have any recommendations for this course?

no
I was satisfied with this course and have no improvements.
No recommendations.
None at this time.
I think it is good for stat major students to take this course under this Professor.
maybe include youtube vids to add extra explanations
No, I believe the class was ran well.
not really.
Not really.
no
I liked it how it was.
I think that this course was ran extremely well and I would not change anything had I been running it myself.
I think for a very technical-based class, it would be nice to work with other people on a project at the end of the year instead of a final. It would be cool to make a collaborative GitHub with a team or a partner, follow some guidelines, and make a project.
None
No, honestly was an amazing course! I would highly recommend taking Professor Hahn's class to those who need to take STAT 380.
